PHYSICS

COURSE - I

MATHEMATICAL PHYSICS AND CLASSICAL MECHANICS

CONTENTS

		Page No.
BLOCK I: SPECIAL FUNCTIONS		
Unit - 1	Legendre's Polynomials	1
Unit - 2	Bessel Functions	25
Unit - 3	Hermite Polynomials	46
Unit - 4	Laplace Equation and Wave Equation	59
BLOCK II: INTEGRAL TRANSFORMS		
Unit - 5	Fourier Transforms and Applications	73
Unit - 6	Laplace Transforms and Applications	96
BLOCK III: TENSOR ANALYSIS		
Unit - 7	Tensor Algebra	126
Unit - 8	Metric Tensor & Christoffel Symbols	149
BLOCK IV: MECHANICS OF SYSTEM OF PARTICLES		
Unit - 9	Lagrangian Mechanics	170
Unit - 10	Lagrange's Equations	181
Unit - 11	Hamilton's Principle	194
Unit - 12	Hamiltonian Mechanics	201
Unit - 13	Canonical Transformations and Hamilton - Jacobi Theory	209
Unit - 14	Poissons Brackets	219
BLOCK V: NUMERICAL METHODS		
Unit - 15	Numerical Interpolation	224
Unit - 16	Numerical Differentiation	250
Unit - 17	Numerical Integration	260
Unit - 18	Solutions of Equations	284
Unit - 19	Numerical Solutions of Ordinary Differential Equations	312

M.Sc. PHYSICS

COURSE-II STATISTICAL MECHANICS AND QUANTUM MECHANICS

CONTENTS

BLOCK-I: INTRODUCTION TO STATISTICAL MECHANICS		
Unit-1:	Statistical Mechanics - Thermo dynamics	3
Unit-2:	Ensembles	9
Unit-3:	Density Distribution - Liouville's Theorem	14
Unit-4:	Postulates of classical Statistical Mechanics	22
Unit-5:	Micro canonical Ensemble	29
Unit-6:	Maxwell - Boltzmann Statistics	37
Unit-7:	Canonical and grand canonical ensembles	44
BLOCK-II: QUANTUM STATISTICS		
Unit-8:	Postulates of Quantum Statistical Mechanics	57
Unit-9:	Quantum Statistics - Be and F-D Statistics	62
BLOCK-III PRINCIPLES OF QUANTUM MECHANICS		
Unit-10:	Birth of quantum mechanics	73
Unit-11:	Eigen values and eigen functions	85
Unit-12:	Dirac's bra and ket vectors	88
Unit-13:	Eigen functions and uncertainty principle	94
BLOCK-IV SCHRODINGER EQUATIONS AND ANGULAR MOMENTUM THEORY		
Unit-14:	Schrodinger wave equation	103
Unit-15:	Applications of Schrodinger's equation to one dimensional problems	112
Unit-16:	Angular momentum	125
Unit-17:	Application of schrodinger's equation to three dimensional problems.	136
Unit-18:	Hydrogen atom	141
Unit-19:	Spin angular momentum	155
Unit-20:	Addition angular momenta	166
BLOCK-V: APPROXIMATION METHODS		
Unit-21:	Time independent perturbation theory	217
Unit-22:	Variation method	229
Unit-23:	Time dependent perturbation theory	253
BLOCK-VI: RELATIVISTIC QUANTUM MECHANICS		
Unit-24:	Klein Gordon relativistic equation and applications	265
Unit-25:	Dirac's relativistic equation and applications.	274

COURSE - 3

SOLID STATE PHYSICS

C3

CONTENTS

	PAGE NO.
BLOCK I: CRYSTALLINE STATE AND CRYSTAL STRUCTURE	
UNIT-1: CRYSTALLINE STATE AND CRYSTAL STRUCTURE	2
UNIT-2: NON CRYSTALLINE STATE	34
UNIT-3: ELEMENTS OF X-RAY DIFFRACTION	48
UNIT-4: EXPERIMENTAL TECHNIQUES FOR STRUCTURE DETERMINATION	70
BLOCK II: IMPERFECTION IN CRYSTALS	
UNIT-5: IMPERFECTIONS IN CRYSTALS	91
UNIT-6: DIFFUSION	106
UNIT-7: DISLOCATIONS	118
BLOCK III: FREE ELECTRON THEORY BAND THEORY OF SOLIDS	
UNIT-8: FREE ELECTRON THEORY	132
UNIT-9: BAND THEORY OF SOLIDS	152
UNIT-10: SEMICONDUCTORS	167
UNIT-11: SOLID STATE LASERS	185
BLOCK IV: LATTICE VIBRATIONS AND THERMAL PROPERTIES	
UNIT-12: ELASTIC WAVES IN SOLIDS	199
UNIT-13: INFRA-RED ABSORPTION IONIC CRYSTALS	208
UNIT-14: LATTICE HEAT CAPACITY	212
BLOCK V: DIELECTRICS AND FERROELECTRICS	
UNIT-15: MACROSCOPIC DESCRIPTIONS OF DIELECTRICS	225
UNIT-16: MEASUREMENT OF DIELECTRIC CONSTANT	240
UNIT-17: FERROELECTRICS	256
BLOCK VI: MAGNETISM & SUPERCONDUCTIVITY	
UNIT-18: MAGNETISM	268
UNIT-19: SPONTANEOUS MAGNETIZATION	278
UNIT-20: OCCURRENCE OF SUPERCONDUCTIVITY	293
UNIT-21: SUPERCONDUCTIVITY – THEORETICAL EXPLANATIONS	307

M.Sc.

PHYSICS

COURSE - IV

SEMICONDUCTOR DEVICES ANALOG AND DIGITAL ELECTRONICS

CU

CONTENTS		Page No.
BLOCK -I : SEMICONDUCTOR DIODES, TRANSISTORS AND AMPLIFIERS		
Unit -1	: Semiconductor Diodes	1
Unit-2	: Transistors	26
Unit-3	: Power Supplies	50
Unit-4	: Feedback Amplifiers	86
Unit-5	: RC coupled amplifier and its frequency response	104
Unit-6	: Oscillators (Using Transistors)	112
Unit-7	: Multivibrators (Using Transistors)	125
BLOCK -II : OPERATIONAL AMPLIFIERS		
Unit -8	: Operational Amplifier and its characteristics parameters.	134
Unit-9	: Operational Amplifier - configurations	144
Unit-10	: Operational Amplifier - Frequency Response	150
Unit-11	: Operational Amplifier - Linear Applications	158
Unit-12	: Operational Amplifier - Non-Linear Applications	169
Unit-13	: Operational Amplifier - Wave form generators	178
BLOCK-III : DIGITAL ELECTRONICS		
Unit-14	: Introduction to Digital Electronics and Logic Gates	185
Unit-15	: Applications of EX-OR gate	199
Unit-16	: De-Morgan's Theorems Fundamental Products, Karnaugh map	209
Unit-17	: Flip-flops	224
Unit-18	: Shift Registers	235
Unit-19	: Counters	245
Unit-20	: Multiplexer and Demultiplexer	255
BLOCK-IV : CONVERTERS		
Unit-21	: Digital- to - Analog Converters	268
Unit-22	: Analog - to - Digital Converters	279

PHYSICS

COURSE - 5

**NUCLEAR PHYSICS
AND
ANALYTICAL TECHNIQUES**

CONTENTS

Sl.No.	Page Nos.
Block - 1: Nuclear decay Processes	
Unit-1: Alpha Spectrum, Gamow's theory of α -decay	3
Unit-2: Beta Spectrum, Neutrino hypothesis, Fermi theory of α -decay, Fermi-Kurie Plots, selection rules for β -decay	16
Unit-3: Gamma emission-Multi-pole radiation – selection rules for γ -decay	27
Unit-4: Classification of elementary particles – Fundamental interactions – Conservation laws	35
Unit-5: Interaction of charged Particles and Gamma Radiation with matter	48
Unit-6: Radiation Detectors	65
Block – II: Nuclear forces and Nuclear Models	
Unit-7: Properties of Nucleus-Nuclear radius, Nuclear Mass and Binding Energy, Angular Momentum, Nuclear statistics, Parity and Symmetry, Magnetic dipole moment, Electric quadrupole moment.	77
Unit-8: Nature of nuclear forces, Two body problem, Bound and spin states of two nucleons, Theory of deuteron, Tensor forces, Exchange forces, meson theory of nuclear forces	96
Unit-9: Nuclear models, Liquid drop model, Formula for total binding energy of the nucleus, Weizsacher's semi empirical mass formula, Values of the empirical coefficients	112
Unit-10: Shell Model – Experimental Evidence Predictions, Spin Orbit Coupling and Achievements of The Shell-model	122
Block – III: Nuclear Reactions	
Unit-11: Types of Nuclear reactions, Conservation laws, Kinematics of Nuclear reactions, Q-value, Nuclear cross section, Compound nucleus, Discrete energy levels of nucleus, Breit - Wigner formula	135
Unit-12: Basic properties of neutrons, classification of neutrons, slowing down of neutrons, logarithmic decrement in energy, moderating ratio, neutron diffusion – neutron current density, neutron leakage current, fermi age equation, bohr and wheeler theory of fission, four – factor formula	162

Block – IV: Materials Characterization techniques

- Unit-13: Phase contrast microscopy, Principle, Theory, Instrumentation. Applications, Electron microscopy, Principle. Scanning electron microscope, Instrumentation, Transmission electron microscope. Instrumentation, Applications of electron microscopes. Advantages of sem over tem. 195
- Unit-14: Thermo gravimetric analyser, Principle, Instrument control, Applications, Differential scanning calorimetry, Principle. Instrumentation, Power compensated DSC, Heat flux DSC. Temperature control methods, the average temperature. control, Differential temperature control 207
- Unit-15: Theory of mossbauer effect: Recoil-less emission and absorption of gamma rays- nuclear, resonance experimental technique to observe mossbauer effect, mossbauer nuclides 220
- Unit-16: Mossbauer parameters – Isomer shift, Quadrupole splitting, Magnetic hyperfine splitting (Qualitative treatment) Simple applications 231

Block – V: Resonance Spectroscopy

- Unit-17: NMR Theory - Simple and classical, Relaxation Mechanisms - Spin - spin and spin - lattice 245
- Unit-18: Bloch equations, complex susceptibility, NMR instrumentation related to absorption and induction techniques, chemical shift, spin-spin coupling, ethyl and methyl alcohol NMR spectra, Major areas of NMR 272
- Unit-19: Principles of ESR, Conditions for resonance, ESR Spectrometer, Interpretation of Spectra, Hyperfine Interactions, Applications of ESR 301
- Unit-20: Nuclear Quadrupole Moment, Electric Field Gradients, Nuclear Quadrupole Resonance, Energy Levels in different EFG Symmetries, NQR Spectrometer, Applications. Review on NMR, ESR and NQR 334

PHYSICS

COURSE - 6

Electromagnetic Theory and Spectroscopy

CONTENTS

	Page No.
BLOCK I: ELECTRO MAGNETIC THEORY	
Unit 1: Electric Field	2
Unit 2: Magnetic Statics	17
Unit 3: Electro Dynamics	13
Unit 4: EM Waves in Matter	37
Unit 5: Electro Magnetic Radiation	46
Unit 6: Liénard-Wiecher Potentials	57
Unit 7: Radiated Power	63
BLOCK II: ATOMIC SPECTRA	
Unit 8: Fine Structure	88
Unit 9: Zeeman, Paschen-Back and Stark Effects	88
Unit 10: Vector Atom Model L-s and Lj Coupling of Two Electron Spins	88
Unit 11: Two Electron System, Lande 'G' Factor	88
BLOCK III: MOLECULAR SPECTRA	
Unit 12: Rotational Spectra of Diatomic Molecules	104
Unit 13: Vibrational Spectra	111
Unit 14: Electronic Spectra	121
Unit 15: Franck-Condon Principle, Dissociation Energies	127
Unit 16: Franck Condon Principle	138
BLOCK IV: IR AND RAMAN SPECTRA	
Unit 17: Principle of IR Spectroscopy, IR Double Beam Spectrometer	148
Unit 18: Raman Scattering	158
Unit 19: Rotational and Vibrational Raman Spectra	164
Unit 20: Laser Raman Spectrometer, Differences Between IR and Raman Spectra	172

M.Sc. PHYSICS

COURSE – VII

MEMORY DEVICES AND MICRO PROCESSORS

CONTENTS	Page No.
BLOCK-I : LOGIC FAMILIES	1
Unit-1 : Logic families and their performance characteristics	2
Unit-2 : Emitter-Coupled Logic (ECL, PMOs, CMOs Logic and Tri state Logic)	11
Unit-3 : Comparisons of Logic families	18
BLOCK-II : SEMI CONDUCTOR MEMORIES	27
Unit-4 : Classification and Characteristics of Memories	28
Unit-5 : Memory organization and expansion	39
BLOCK-III : INTEL 8085 MICROPROCESSOR ORGANIZATION AND ARCHITECTURE	49
Unit-6 : Micro processor Organization and Architecture	50
Unit-7 : Pin configuration of Intel 8085 Micro processor	67
Unit-8 : Timing diagrams	74
BLOCK-IV : ADDRESSING MODES AND PROGRAMMING OF 8085 MICRO PROCESSORS	86
Unit-9 : Addressing modes and instruction set of Intel 8085	87
Unit-10 : Programming of Micro processor Intel 8085	110
Unit-11 : Assembly Language Programming using Loops	136
BLOCK-V : PERIPHERAL DEVICES AND INTERFACING	165
Unit-12 : I/O Interfacing & Data Transfer Schemes	167
Unit-13 : Intel 8053 Programmable interval Timer	177
Unit-14 : Programmable Peripheral Interface (8255)	188
Unit-15 : Priority Interrupt Controller (8259)	207
BLOCK-VI : INTEL 8086 MICROPROCESSOR	225
Unit-16 : Intel 8086 Micro processor	226
Unit-17 : Addressing Modes and Instruction set of Intel 8086 Micro Processor	240
Unit-18 : Pin Configuration of Intel 8086 Micro Processor	254
BLOCK-VII : ADVANCED MICRO PROCESSORS	262
Unit-19 : Architecture of Micro Processors 80286, 80386, 80486	263
Unit-20 : The Pentium Microprocessor	283

COURSE - VIII

MICROWAVE DEVICES
AND
COMMUNICATION SYSTEMS

8

CONTENTS

	Page No.
Block-I: Passive Devices - Wave guides	
Unit-1: Passive Devices - Wave-guides	1
Unit-2: Cut off wavelength	2
Unit-3: Rectangular Wave guides	13
Block-II: S-Matrix	
Unit-4: Scattering matrix	39
Unit-5: S-Matrix of E-Plane H-Plane and magic tee	50
Block-III: Wave guide Components	
Unit-6: Waveguide Components	60
Unit-7: Phase Shifters	66
Block-IV: Microwave Semiconductor devices	
Unit-8: Microwave Semiconductor Devices	75
Unit-9: Parametric Devices	85
Block-V: Microwave Tubes	
Unit-10: Two Cavity Klystron	92
Unit-11: Magnetron	101
Unit-12: Travelling Wave tube (TWT)	106
Block-VI: Modulation & Demodulation	
Unit-13: Modulation	113
Unit-14: Demodulation	133
Block-VII: Antennas	
Unit-15: Antenna Fundamentals	142
Unit-16: VHF antennas	158
Unit-17: Microwave antennas	173
Block-VIII: RADARS	
Unit-18: Radars	184
Unit-19: Types of Radar	191
Unit-20: Tracking radar:	196
