Abstract - This paper is illustrates about the new advanced technologies evolved from information technology which are designed and developed for adopting and implementing advanced features in the field of Library Management and also these technology enables a greater impact within the library community around the globe. This paper is also defining various new technologies and their definitions and also defining its impact on library Management in future.

Key words: information technology, Black chain, Data Mining, Cloud computing, Internet, Library Management.

Introduction

Technology plays a vital role on human life in human lives. Technology provide several benefits in all the fields globally. The new technology is to be utilized for best results and improving skills for implementing sophisticated methods over various fields. Decreasing time period by adopting new techniques and concepts. There are many new technology methods / concepts are described as under to give a better insight to all of us.

Following are some of the major achievements in the field of modern technology.

Internet Technology
New Technological Applications,
Data Mining,
Cloud Computing
Search Engine Technology etc.
